Interact-TV Expands into Educational Markets

-- eTelly Accepted by Two School Districts as Multimedia Distribution Platform in Pilot Program --

Westminster, CO, April 28, 2005 – Interact-TV™ (OTC:ITVI), a leading developer of Linux-based home entertainment servers, is pleased to announce that eTelly, a customized version of its high performance Telly Home Entertainment Server™, has successfully completed initial testing and has been accepted by two school districts for piloting as a networked multimedia distribution platform.

Interact-TV partnered with Info-Data Services Inc., a leading provider of system integration consulting services, in the eTelly implementation which addresses the needs of the teacher in the classroom. Using eTelly's central video library, a teacher is able to select a video by subject matter, title or grade level using a series of simple-to-use menus. eTelly allows the teacher to easily preview videos on their desktop computer to make sure the content correctly represents their curriculum and then select the complete video or bookmarked segments to view in class with the students. Students can go to the school library to view a video they missed when they were absent or to review before a test. Music and photographs are also available from the eTelly central library.

“We are gratified with the acceptance of our customized offering to this vertical market which was based upon input from teachers and school administrators and look forward to continuing to enhance our offering as the needs of the educational market evolve,” stated Don Dashefsky, President of Info-Data Services.

eTelly eliminates the traditional distribution problems found in school districts across the country where it is often difficult to get access to media; either videos are stored at remote locations or they are in use at other facilities. eTelly provides a robust and cost effective solution for distributing digital multimedia within a school. With eTelly, digital content resides on a single eTelly server and any teacher or student can access that content using a PC that resides on the school's network. The digital content is always available.

“eTelly is able to leverage the cost effective Telly Home Entertainment Server product line and its supporting Linux-based EOS software platform to deliver a solution targeting this vertical market,” stated Ken Fuhrman, CEO of Interact-TV. “The scalability of the eTelly that currently allows for up to 1.2 Terabytes of digital media storage and its ability to index video segments is perfect for the educational environment.”
