Telly MC1200 Home Entertainment Server Receives 2005 Innovations Award from Consumer Electronics Association

Westminster, Colo., November 12, 2004 – Interact-TV (OTC:ITVI), a leading developer of home entertainment servers, has received the coveted Innovations award for its Telly™ MC1200 Home Entertainment Server from the Consumer Electronics Association. The highly anticipated Innovations 2005 honoree announcement was made at the New York International CES Press Preview on November 10, 2004.

Since 1989, the prestigious Innovations Design and Engineering Awards Showcase has given consumer technology manufacturers and developers an opportunity to have their newest products judged by a preeminent panel of independent industry designers, engineers and journalists. “We are excited to have been selected by the CEA for this honor” stated Ken Fuhrman, CEO of Interact-TV. “It is extremely rewarding to be recognized for the unique capabilities we bring to the market with this product.”

The Interact-TV honored product is the Telly MC1200, a Home Entertainment Server recognized for its ability to allow consumers to easily store, manage, access and enjoy digital media in their home. The Telly MC1200 model delivers the full Telly feature set, including DVD library, CD library, digital video recording, pause live TV, digital photo library, and TV displayed Internet information including weather, financial and movie listings, among its capabilities. Users can also manage and view media and schedule recording remotely via Telly’s own Web site and share media with networked PCs and media adapters such as Slim Devices’ Squeezebox. All of these features are enabled by Interact-TV’s EOS™ Linux-based Media Platform, designed to provide customers with expansion capabilities and easy upgradeability.

The Telly MC1200 Home Entertainment Server is available directly from the manufacturer’s online store at <http://www.buyatelly.com> and from a growing network of reseller partners throughout North America.
